NATA JAT Article Review

Instructions: Read a JAT article and then provide *handwritten* responses which are in your own words. I know what is in the article...I need to see is how you interpret it.

Article Title: _____

1. Who were the researchers?

2. What were they trying to accomplish, prove, disprove, etc.?

3. What was the general set up for their experiment including equipment, test subjects, time frames, etc.?

4. What were the controlled variables of the experiment? Manipulated variables? What made them controlled or manipulated (I'm looking to see if you know the difference)?

a. **Controlled** – _____

b. **Manipulated** – _____

5. Were there potential flaws in their experiment? If yes, what were they?

6. What type of assessment tools/methods did they use (e.g. questionnaires, hard data, interviews, etc.)? Were the assessments appropriate for the experiment? If not, describe how so.

7. What were the results of their experiment?

8. What implications do the results of the experiment have for the medical field?

9. Identify at least 5 terms/symbols you were not familiar with and define them.

a.

b.

c.

d.

e.

10. Develop two questions you could ask the researchers. Why would you ask each question (i.e. what's your motive or interest)?

a.

b.
